Q21. **DUKE MATH OBSERVATION FORM**
Your responses to this form will be given to the person being observed, so please write it **directly to them**. Thank you for taking the time to give detailed and objective feedback, as this is essential for growth.

Name. Name of instructor/student being observed

Jason Ma

Q19. Instructor/student role

Instructor of Record

Observer. Name of observer

Tori Akin

Q20. Observer role

Other

Date. Date and time of observation

1/21 10:05

Location. Location

East Duke 209D

Course. Course #

Math 111L

 # students. Number of students

28?

Q16. Instructor's teaching goals (if available):

Paying attention to pacing, handwriting, group activities/checking for understanding

Q16. Use this scale to score each item: 1 is minimally to 5 is completely

Prep. Preparation

	1	2	3	4	5	N/A
Demonstrates knowledge of content	○	○	○	○	●	○
Demonstrates knowledge of students (names, backgrounds, cultures, abilities)	○	○	○	○	●	○
Prepared to teach	○	○	○	○	●	○

Envir. Classroom Environment

	1	2	3	4	5	N/A
Creates an environment of respect and rapport: is friendly, inclusive, approachable	○	○	○	○	●	○
Manages classroom logistics and procedures	○	○	○	○	●	○
Students are actively engaged	○	○	○	○	●	○
Students participate in classroom discussion	○	○	○	○	●	○
Students engage with other students in their learning	○	○	○	○	●	○

Instruction. Instruction

	1	2	3	4	5	N/A
States what students will be learning: outcomes, review	○	○	○	○	●	○
Speaks clearly and with positive tone	○	○	○	○	●	○
Demonstrates patience and understanding	○	○	○	○	●	○
Demonstrates focus, makes eye contact	○	○	○	○	●	○
Pacing provides time for students to think, discuss, answer	○	○	○	○	●	○
Board work is orderly, legible, consistent, includes diagrams	○	○	○	●	○	○
Promotes active learning: asks students to explain thinking, allows for discussion	○	○	○	○	●	○
Facilitates group work	○	○	○	●	○	○
Asks a variety of questions w/appropriate wait time	○	○	○	○	●	○

Checks for understanding	○	○	○	○	◉	○

Success. Success - what is going well?

This was great! Very well organized class. And engaging! It was structured quite well, and you did a very nice job of creating an active learning environment. Announcements are clear, helpful, and encouraging. You seem organized and in control of the class. The warmup question is tough yet accessible. It is engaging and students work with each other. You spent time on checking for understanding, giving students time to think, and answering lots of student questions. This was great! The Desmos demo was lovely - I even heard a student refer back to it at the end of class when trying to explain a concept to their peer. So, it was helpful to students! The pace is great - you covered a LOT of material with enough time for students to think and discuss ideas with each other.

Challenges. Challenges - what needs support?

One nice thing was that students asked many questions - they are comfortable enough to ask questions, and I think they are asking good questions. There were a few times when you provided a theoretical explanation for a question, but it could be nice to instead offer a concrete example (e.g., to explain differentiability it might be nice to provide an example of a function that is differentiable and one that is not) I would say your writing on the tablet is large enough but not always clear. (Sometimes "+" looks like "t" and some words are hard to make out.) For this group of students it may be helpful to include slightly more of the algebraic steps (for example you may want to show (h^2+2h)/h= (h(h+2)/h)=h+2. Showing that factoring may help students see the cancelation. You may also want to show plugging in "h=0" for some limits.)

Next. Additional thoughts, questions, ideas

Really strong class. Up beat. The students are engaged. You are presenting the material really clearly! It's great! For ideas on how to check for understanding from everyone: You could try an exit ticket - ask everyone to submit an index card with a question or comment at the end of class. You could try slido - this is polling software and students can use their phones to anonymously tell you how they are understanding things.
